this volume is a compilation of the proceedings of the second international conference on cognitive technology held in 1997

this volume is based on a workshop sponsored by the editor at ibm and includes contributions from an international group of researchers in the field of human computer interaction

part of the prentice hall series in educational innovation this concise new volume is the first book devoted entirely to describing and critiquing the various theoretical frameworks used in chemistry education science education research with explicit examples of related studies provides a broad spectrum of theoretical perspectives upon which readers can base educational research includes an extensive list of relevant references presents a consistent framework for each subject area chapter a useful guide for practicing chemists chemistry instructors and chemistry educators for learning how to do basic educational research within the context of their own instructional laboratories and classrooms

this volume contains selected papers from the 10th interdisciplinary workshop in informatics and psychology which had as its theme cognitive aspects in visual languages and interfaces visual languages in general visual programming languages in particular and graphical or visual user interfaces are increasingly regarded as important improvements for the interaction between people and artifacts visual and graphical user interfaces have already a history of a number of years in terms of research and development the focus on visual languages and visual programming languages however is more recent the development of graphical user interfaces was accompanied and reinforced by psychological research but visual languages are still mainly

inventions of designers and not designed on the basis of principles derived also from knowledge of psychology or other behavioral sciences the presentations and discussions at the workshop showed increasing interest in paradigms of visual languages and their psychological foundation visual languages and interfaces must be seen as means to support and enhance representation application and processing knowledge visually the study of the cognitive aspects in visual languages and interfaces is thus an important part of human computer interaction as a discipline concerned with the design evaluation and implementation of interactive computer systems for human use and with the study of major phenomena surrounding them definition of hci in the acm sigchi curricula for human computer interaction this book will stimulate future research in the area of human computer interaction and visual languages

this work explores the social processes involved in technological innovation particularly in relation to the information and communications technologies icts

the meeting focused on those cfd based methods which address the problem of design for given aerodynamic characteristics in a direct sense examples are inverse methods which provide the detailed geometry required to generate a given pressure distribution and methods utilizing numerical optimization techniques to obtain the geometry that minimizes subject to constraints a given aerodynamic objective function such as drag load distribution etc abs
